# Course Aims

程序代写代做 CS编程辅导

Computer Science is exploring the ability, and limitation, of computers to solve problems. It covers:

- **What** are computers capable of solving?
- **How** can we get computers to solve problems?
- **Why** do these approaches work?

WeChat: cstutors  
Assignment Project Exam Help

This course aims to increase your level of mathematical maturity to assist with the fundamental problem of **finding, formulating, and proving** properties of programs.

# Assessment Summary

程序代写代做 CS编程辅导

60% exam, 30% assi

10% quizzes:

- 9 quizzes, worth 7 marks each
- 3 assignments, worth up to 10 marks each
- final exam (3 hours) worth up to 60 marks

WeChat: cstutorcs

Quizzes are available for 48 hours before the first lecture of the week. Assignments due on Mondays of weeks 5, 8 and 11.

**You must achieve 40% on the final exam to pass**

QQ: 749389476

Your final score will be taken from your 6 best quiz results, 3 assignments and final exam

<https://tutorcs.com>

# Late policy and Special Consideration

程序代写代做 CS编程辅导

All assessments are submitted through the course website

Lateness policy

- Assignments: 5% of total grade off raw mark per 24 hours or part thereof  
**WeChat: cstutorcs**
- Quizzes: Late submissions not accepted  
**Assignment Project Exam Help**
- Exam: Late submissions not accepted  
**Email: tutorcs@163.com**

If you cannot meet a deadline through illness or misadventure you need to apply for **Special Consideration**.

# Examples

程序代写代做 CS编程辅导

## Example (Bad)

Ex 1 a) ~~1000~~

72 c) 12

WeChat: cstutorcs

$$\begin{aligned} Ex\ 2: \quad & (A \setminus B) \cup (B \setminus A) = A \cap B^c \cup B \cap A^c = (A \cup B) \cap (A \cap A^c) \cap (B \cap B^c) \cap (B \cap A^c) \\ & = (A \cup B) \cap (\emptyset \cap \emptyset) = (A \cup B) \cap \emptyset = (A \cup B) \cap (A \cap B) \text{ by DeM's law} \end{aligned}$$

Assignment Project Exam Help

Ex 3 a) Yes b) No c) Yes d) No e) Yes f) Yes Ex 4 a) True b) False

Email: tutorcs@163.com

~~Ex 1~~ ~~1000~~

QQ: 749389476

<https://tutorcs.com>

# Examples

程序代写代做 CS编程辅导

## Example (Good)

Ex. 2

$$(A \setminus B) \cup (B \setminus A) \quad (\text{Def.})$$

$$= ((A \cap B^c) \cup B) \cap ((A \cap B^c) \cup A^c) \quad (\text{Dist.})$$

$$= (A \cup B) \cap (B^c \cup B) \\ \text{Assignment Project Exam Help} \quad (\text{Dist.})$$

$$= (A \cup B) \cap (A^c \cup B^c) \quad (\text{Ident.})$$

$$= (A \cup B) \cap (A \cap B)^c \quad (\text{DeM.})$$

$$= (A \cup B) \setminus (A \cap B) \quad (\text{Def.})$$

<https://tutorcs.com>

# Examples

程序代写代做 CS编程辅导

## Example (Good)

Ex. 4a

We will show that if  $R_1, R_2$  are symmetric, then  $R_1 \cap R_2$  is symmetric.

Suppose  $(a, b) \in R_1 \cap R_2$ .

WeChat: cstutorcs

Then  $(a, b) \in R_1$  and  $(a, b) \in R_2$ .

Assignment Project Exam Help

Because  $R_1$  is symmetric,  $(b, a) \in R_1$ , and because  $R_2$  is symmetric,  $(b, a) \in R_2$ .

Email: tutorcs@163.com  
QQ: 749389476

Therefore  $(b, a) \in R_1 \cap R_2$ .

<https://tutorcs.com>

Therefore  $R_1 \cap R_2$  is symmetric.

# Proofs

A large component of your work in this course is giving **proofs** of **propositions**.

A **proposition** is a statement that is either true or false.

## Example

Propositions:

WeChat: cstutorcs

- $3 + 5 = 8$
- All integers are either even or odd
- There exist  $a, b, c$  such that  $1/a + 1/b + 1/c = 4$

Assignment Project Exam Help

Email: tutorcs@163.com

Not propositions:

QQ: 749389476

- $3 + 5$
- $x$  is even or  $x$  is odd
- $1/a + 1/b + 1/c = 4$

<https://tutorcs.com>

# Proposition structure

程序代写代做 CS编程辅导

Common proposition forms include:

If A then B  $(A \Rightarrow B)$

A if and only if B  $WeChat: cstutorcs (A \Leftrightarrow B)$

For all x, A  $(\forall x.A)$

There exists x such that A  $(\exists x.A)$

$\forall$  and  $\exists$  are known as **quantifiers**.

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

# Proofs

程序代写代做 CS编程辅导

A large component of work in this course is giving **proofs** of **propositions**.

A proof of a proposition is an argument to convince the reader/marker that the proposition is true.

WeChat: cstutorcs  
Assignment Project Exam Help

A **proof** of a proposition is a finite sequence of logical steps, starting from base assumptions (**axioms** and **hypotheses**), leading to the proposition in question.

Email: tutorcs@163.com  
QQ: 749389476

<https://tutorcs.com>

# Proofs

程序代写代做 CS编程辅导

## Example

Prove:  $3 \times 2 = 2 \times 3$

$$3 \times 2 = (2 + 1) \times 2$$

$$\begin{aligned} \text{WeChat: } & \text{cstutorcs} \\ &= (2 \times 2) + (1 \times 2) \\ &= (1 \times 2) + (2 \times 2) \end{aligned}$$

Assignment Project Exam Help

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: [749389476](#)

<https://tutorcs.com>

# Proofs: How much detail?

程序代写代做 CS编程辅导

- Depends on the context (question, expectation, audience, etc)
- Each **step** should be justified (excluding basic algebra and arithmetic)

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

# Proofs: pitfalls

程序代写代做 CS编程辅导

Starting from the premise  and deriving true **is not valid.**

## Example

Prove:  $0 = 1$

WeChat: cstutorcs

$$0 = 1$$

So (mult. by 2)  $0 = 2$  Assignment Project Exam Help

So (subtract 1)  $-1 = 1$

So  $\frac{-1}{(-1)^2} = \frac{1}{(1)^2}$  Email: tutorcs@163.com

So  $\frac{1}{-1} = 1$  which is true.  
QQ: 749389476

Does this mean that  $0 = 1$ ?

<https://tutorcs.com>

## Proofs: pitfalls

# 程序代写代做 CS编程辅导

Make sure each step is logically valid

## Example

$$20 = -20$$

So WeChat: cstutorcs

So  $5^2 - 2 \cdot 5 \cdot \frac{9}{2} = 4^2 - 2 \cdot 4 \cdot \frac{9}{2}$

$$\text{So } 5^2 - 2 \cdot 5 \cdot \frac{9}{2} + \left(\frac{9}{2}\right)^2 = 4^2 - 2 \cdot 4 \cdot \frac{9}{2} + \left(\frac{9}{2}\right)^2$$

Email: tutorcs@163.com

$$\text{So } \frac{(5 - \frac{9}{2})^2}{(4 - \frac{9}{2})^2} =$$

QQ: 749389476

$$\text{So } \frac{5 - \frac{9}{2}}{14} = 4 - \frac{9}{2}$$

Does this mean that  $5 \equiv 4$ ? https://

# Proofs: pitfalls

程序代写代做 CS编程辅导

Make sure each step is logically valid

## Example

Suppose  $a = b$ . Then

WeChat: cstutorcs

$$\text{So } a^2 - b^2 = ab - b^2$$

$$\text{So } (a-b)(a+b) = (a-b)b$$

$$\text{So } a+b = b$$

$$\text{So } a = 0$$

QQ: 749389476

This is true no matter what value  $a$  is given at the start, so does that mean everything is equal to 0?

<https://tutorcs.com>

# Proofs: pitfalls

程序代写代做 CS编程辅导

For propositions of the form  $\forall x.P(x)$ , where  $x$  can have infinitely many values:

- You cannot enumerate infinitely many cases in a proof.
- Only considering a finite number of cases is not sufficient.

## Example

## Assignment Project Exam Help

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

True for  $n = 0, 1, 2, \dots, 39$ . Not true for  $n = 40$ .

<https://tutorcs.com>

# Proofs: pitfalls

程序代写代做 CS编程辅导

The order of quantifiers is important when it comes to propositions:

## Example

- For every number  $x$ , there is a number  $y$  such that  $y$  is larger than  $x$
- There is a number  $y$  such that for every number  $x$ ,  $y$  is larger than  $x$

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

# Proof strategies: direct proof

程序代写代做 CS编程辅导

Proposition form	Need to do this
$A \Rightarrow B$	Assume A and prove B WeChat: cstutorcs
$A \Leftrightarrow B$	Prove "If A then B" and "If B then A" Assignment Project Exam Help
$\forall x.A$	Show A holds for every possible value of x Email: tutorcs@163.com
$\exists x.A$	Find a value of x that makes A true QQ: 749389476

<https://tutorcs.com>

# Proof strategies: contradiction

程序代写代做 CS编程辅导

To prove A is true, assume A is false and derive a contradiction.  
That is, start from the negation of the proposition and derive false.

## Example

WeChat: cstutorcs

Prove:  $\sqrt{2}$  is irrational

Assignment Project Exam Help

Proof: Assume  $\sqrt{2}$  is rational ...

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

# Negating propositions

程序代写代做 CS编程辅导

Proposition form	 <a href="http://tutorcs.com">tutorcs.com</a>
$A \text{ and } B$	 $\neg(A \text{ or not } B)$
$A \text{ or } B$	 $\neg(\neg A \text{ and not } B)$
$A \Rightarrow B$	 $\neg A \text{ and not } B$
$A \Leftrightarrow B$	 $\neg A \text{ and not } B \text{ or } B \text{ and not } A$
$\forall x.A$	 Email: <a href="mailto:tutortcs@163.com">tutortcs@163.com</a>
$\exists x.A$	 QQ: <a href="https://tutorcs.com">749389476</a>

# Proof strategies: contrapositive

程序代写代做 CS编程辅导

To prove a proposition of the form “If A then B” you can prove “If not B then not A”

WeChat: cstutorcs

## Example

Prove: If  $m + n \geq 73$  then  $m \geq 37$  or  $n \geq 37$ .

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

# Proof strategies: dealing with $\forall$

程序代写代做 CS编程辅导

How can we check in any cases?

- Choose an **arbitrary** element: an object with no assumptions about it (may have to check several cases)
- Induction (see week 5) **WeChat: cstutorcs**

## Example

## Assignment Project Exam Help

Prove: For every integer  $n$ ,  $n^2$  will have remainder 0 or 1 when divided by 4.

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

QQ: 749389476

**Note:** “Arbitrary” is not the same as “random”.

<https://tutorcs.com>
