$f : S \rightarrow T$  describes a mapping between two sets: it means that  $f$  assigns to every element  $s \in S$  exactly one element  $t \in T$ . To emphasise where a specific element  $x \in S$  is mapped to, we can write  $f : x \mapsto y$ , which means the same as  $f(x) = y$ .

## Issues

程序代写代做 CS编程辅导

  - Choice of inputs used
- Cost functions can be complex, e.g.

# “Big-O” Asymptotic Upper Bounds

## Definition

程序代写代做 CS编程辅导

Let  $f, g : \mathbb{N} \rightarrow \mathbb{R}_{\geq 0}$ . We say that  $g$  is *asymptotically less than*  $f$  (or:  $f$  is an upper bound for  $g$ ) if there exists  $n_0 \in \mathbb{N}$  and a real constant  $c > 0$  such that

$$g(n) \leq c \cdot f(n)$$

Therefore,  $3n + 1 \in O(n)$

## Example

$$\frac{1}{10}n^2 \in O(n^2)$$

程序代写代做CS编程辅导

$$O(n \log n) \subsetneq O(n^2)$$

The traditional notation has been

WeChat estutorcs

instead of  $g(n) \in O(f(n))$ .

Assignment Project Exam Help

It allows one to use  $O(f(n))$  or similar expressions as part of an equation; of course these 'equations' express only an approximate equality. Thus,

Email: tutorcs@163.com  
QQ: 749389476

$$T(n) = 2 \cdot T\left(\frac{n}{2}\right) + O(n)$$

means

"There exists a function  $f(n) \in O(n)$  such that  $T(n) = 2T\left(\frac{n}{2}\right) + f(n)$ ."

# Alternative definition

Fact

$f(n) \in O(g(n))$  if and only if  $\lim_{n \rightarrow \infty} \frac{f(n)}{g(n)} < \infty$ .

# “Big-Omega” Asymptotic Lower Bounds

## Definition

程序代写代做 CS编程辅导

Let  $f, g : \mathbb{N} \rightarrow \mathbb{R}$ . We say that  $g$  is *asymptotically greater than*  $f$  (or:  $f$  is an **lower bound** for  $g$ ) if there exists  $n_0 \in \mathbb{N}$  and a real constant  $c > 0$  such that  $g(n) \geq c \cdot f(n)$ , for all  $n \geq n_0$ ,

$$g(n) \geq c \cdot f(n)$$

WeChat: cstutorcs

Write  $\Omega(f(n))$  for the class of all functions  $g$  that are asymptotically greater than  $f$ .

Assignment Project Exam Help

## Example

Email: tutorcs@163.com

$$g(n) = 3n + 1 \xrightarrow{\text{QQ: 749389476}} g(n) \geq 3n, \text{ for all } n \geq 1$$

<https://tutorcs.com>

Therefore,  $3n + 1 \in \Omega(n)$

# “Big-Theta” Notation

程序代写代做 CS编程辅导

## Definition

Two functions  $f, g$  have the same order of growth, or are **asymptotically equivalent**, if they scale up in the same way:

There exists  $n_0 \in \mathbb{N}$  and real constants  $c > 0, d > 0$  such that for all  $n \geq n_0$ ,

WeChat: cstutorcs

$$c \cdot f(n) \leq g(n) \leq d \cdot f(n)$$

Assignment Project Exam Help

Write  $\Theta(f(n))$  for the class of all functions  $g$  that have the same order of growth as  $f$ . Email: [tutorcs@163.com](mailto:tutorcs@163.com)

If  $g \in O(f)$  (or  $\Omega(f)$ ) we say that  $f$  is an *upper bound* (*lower bound*) on the order of growth of  $g$ ; if  $g \in \Theta(f)$  we call it a **tight bound**.

# Properties

Observe that, somewhat symmetrically

程序代写代做 CS 编程辅导

$$g \in \Theta(f) \iff f \in \Theta(g)$$

We obviously have

$$\Theta(f(n)) \subseteq O(f(n)) \quad \text{and} \quad \Theta(f(n)) \subseteq \Omega(f(n)),$$

in fact

WeChat: cstutorcs

$$\Theta(f(n)) = O(f(n)) \cap \Omega(f(n)).$$

Assignment Project Exam Help

At the same time the 'Big Oh' is not a symmetric relation

$$g \in O(f) \not\Rightarrow f \in O(g),$$

https://tutorcs.com

but

$$g \in O(f) \Leftrightarrow f \in \Omega(g)$$

# Observations

## Fact

程序代写代做 CS编程辅导

- For all  $k, \epsilon > 0$ :

$$O((\log n)^k)$$

and  $O(n^k) \subsetneq O((1 + \epsilon)^n)$ .

- All logarithms have the same order, irrespective of base:

$$O(\log_2 n) = O(\log_3 n) = \dots = O(\log_{10} n) = \dots$$

Assignment Project Exam Help

- Exponentials to different bases have different orders:

Email: [tutorcs@163.com](mailto:tutorcs@163.com)

$$O(r^n) \subsetneq O(s^n) \subsetneq O(t^n) \dots \text{ for } r < s < t \dots$$

QQ: 749389476

- Similarly for polynomials

<https://tutorcs.com>

$$O(n^k) \subsetneq O(n^l) \subsetneq O(n^m) \dots \text{ for } k < l < m \dots$$
