Relations and Functions

程序代写代做 CS 编程辅导

Relations are an abstraction used to capture the idea that the objects from certain (often the same domain for several objects) are *related*. Objects may

- influence one another (with other for binary relations; self(?) for unary)
- share some common properties
- correspond to each other precisely when some constraints are satisfied

WeChat: **tutorcs**

Assignment Project Exam Help

Email: **tutorcs@163.com**

Functions capture the idea of transforming *inputs* into *outputs*.

QQ: **749389476**

In general, functions and relations formalise the concept of interaction among objects from various domains; however, there must be a specified domain for each type of objects.

<https://tutorcs.com>

Applications in Computer Science

程序代写代做 CS编程辅导

- Relations are the building blocks of nearly all Computer Science structures
- Databases are collections of relations
- Any ordering is a relation
- Common data structures (e.g. graphs) are relations
- Functions/procedures/programs compute relations between their input and output

WeChat: cstutors

Applications in Computer Science

程序代写代做 CS编程辅导

Many binary relations (i.e. relationships between two entities) that appear in CS fall into d categories:

Equivalence relations ( “equality”):

- Programs that exhibit the same behaviour
- Logically equivalent statements
- The `equals()` method in Java

WeChat: tutorcs

Assignment Project Exam Help

Partial orders (generalizing “less than or equal to”):

Email: tutorcs@163.com

- Object inheritance
- Simulation
- Requirement specifications
- The `compareTo()` method in Java

Relations

Definition

程序代写代做 CS编程辅导

An **n-ary relation** is a subset of the cartesian product of n sets.

$$S_1 \times S_2 \times \dots \times S_n$$

To show tuples related by R we write:

WeChat: cstutorcs

$$(x_1, x_2, \dots, x_n) \in R \quad \text{or} \quad R(x_1, x_2, \dots, x_n)$$

Assignment Project Exam Help

If $n = 2$ we have a **binary** relation $R \subseteq S \times T$ and to show pairs related by R we write:

QQ: 749389476

$$(x, y) \in R \quad \text{or} \quad R(x, y) \quad \text{or} \quad xRy$$

<https://tutorcs.com>

$\mathcal{U} = S_1 \times S_2 \times \dots \times S_n$ is the **domain** of R , and we say R is a **relation on \mathcal{U}** (or **on S** if $S_1 = \dots = S_n = S$ and n is clear).

Examples

程序代写代做 CS编程辅导

Examples

- Equality: =
- Inequality: $\leq, \geq, <, >, \neq$
- Divides relation: |
- Element of: \in
- Subset, superset: \subseteq, \supset
- Congruence modulo n : $m \equiv_{(n)} p$

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Database Examples

程序代写代做 CS编程辅导

Example (Course enrollment)

S = set of CSE students

(S can be a subset of all students)

C = set of CSE courses

(likewise)

WeChat: cstutorcs

E = enrolments = { $(s, c) : s$ takes c }

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

In practice, almost always there are various 'onto' (nonemptiness) and 1-1 (uniqueness) constraints on database relations.

<https://tutorcs.com>

Example (Class schedule) 程序代写代做 CS编程辅导

C = CSE courses

T = starting time (hours)

R = lecture rooms

S = schedule =

$$\{ (c, t, R) \text{ is at time } t \} \subseteq C \times T \times R$$

Assignment Project Exam Help

Example (sport stats)

Email: tutorcs@163.com

QQ: 749389476

$R \subseteq \text{competitions} \times \text{results} \times \text{years} \times \text{athletes}$

<https://tutorcs.com>

Defining Relations

程序代写代做 CS编程辅导

Just as with sets R can be defined by

- explicit enumeration of interrelated k -tuples (ordered pairs in case of binary relations):
WeChat: cstutorcs
- properties that identify relevant tuples within the entire $S_1 \times S_2 \times \dots \times S_k$,
Assignment Project Exam Help
- construction from other relations (e.g. union, intersection, complement etc).

Binary relations

程序代写代做 CS编程辅导

A **binary relation** between sets S and T is a subset of $S \times T$: i.e. a set of ordered pairs.

Also: over S and T ; from S to T ; on S (if $S = T$).

Example (Special (Trivial) Relations)

● **Identity:** (diagonal, equality) $R = \{(x, x) : x \in S\}$

● **Empty:** \emptyset

Email: tutorcs@163.com

● **Universal:** $U = S \times S$

QQ: 749389476

<https://tutorcs.com>

Defining binary relations: Set-based definitions

程序代写代做 CS编程辅导

Defining a relation R :

- Explicitly listing tuples: e.g. $\{(1, 1), (2, 3), (3, 2)\}$
- Set comprehension: $\{(x, y) \in [1, 3] \times [1, 3] : 5|xy - 1\}$
- Construction from other relations:

$\{(1, 1)\} \cup \{(2, 3)\} \cup \{(2, 3)\}^\leftarrow$

WeChat: cstutorcs

QQ: 749389476

<https://tutorcs.com>

Defining binary relations: Matrix representation

Defining a relation $R \subseteq S \times T$:

Rows enumerated by elements of S , columns by elements of T :

Examples

- The relation $\{(1, 1), (1, 2), (1, 3), (2, 2), (3, 2)\} \subseteq [1, 3] \times [1, 3]$:

WeChat: cstutorcs

$$\begin{bmatrix} \bullet & \circ & \circ \\ \circ & \bullet & \circ \\ \circ & \circ & \bullet \end{bmatrix}$$

Assignment Project Exam Help

- The relation Email: tutorcs@163.com

$\{(1, 1), (1, 2), (1, 3), (1, 4), (2, 2), (3, 2)\} \subseteq [1, 3] \times [1, 4]$:

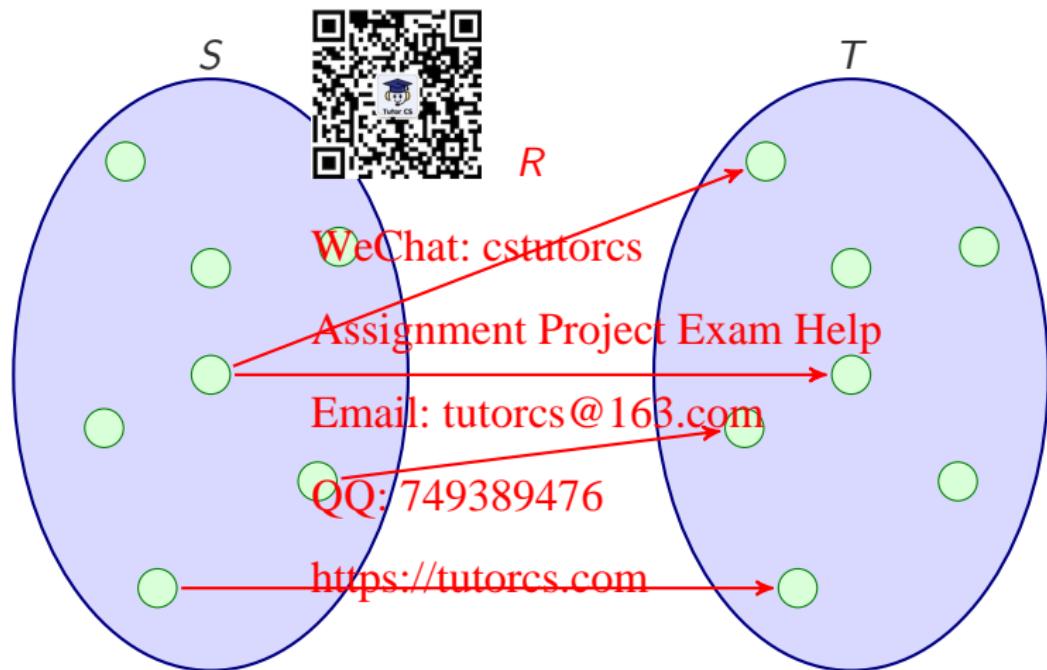

QQ: 749389476

<https://tutorcs.com>

$$\begin{bmatrix} \bullet & \bullet & \bullet & \bullet \\ \circ & \bullet & \circ & \circ \\ \circ & \bullet & \circ & \circ \end{bmatrix}$$

Defining binary relations: Graphical representation

Defining a relation $R \subseteq S \times T$:
程序代写代做 CS 编程辅导

Defining binary relations: Graphical representation

Example

程序代写代做 CS 编程辅导

$$R = \{(1, 1), (2, 3), (3, 1)\} \subseteq [1, 3] \times [1, 3]:$$

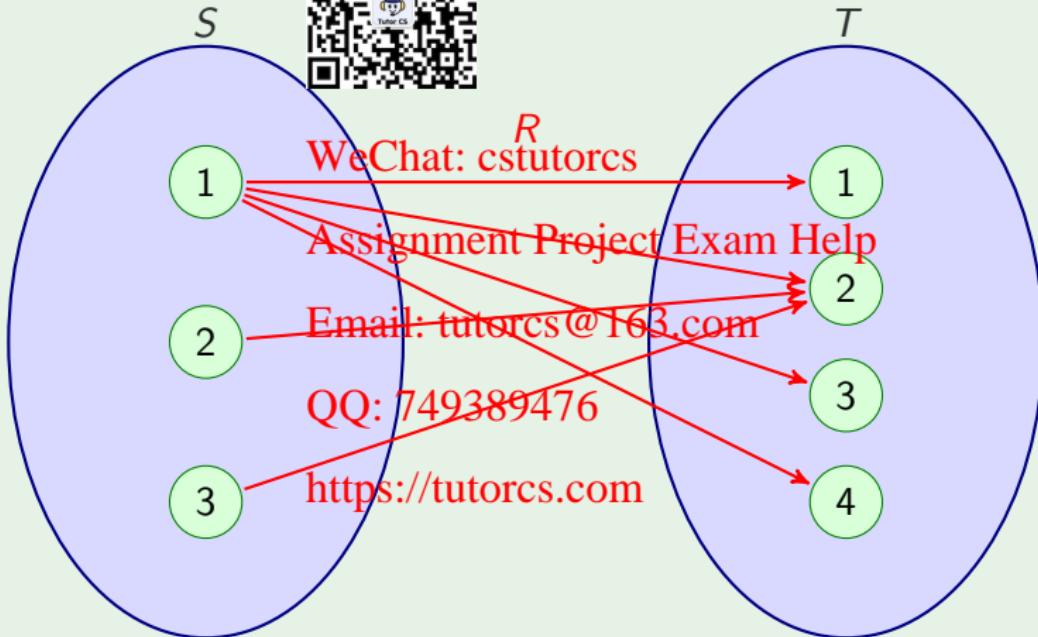

Defining binary relations: Graphical representation

Example

程序代写代做 CS 编程辅导

$$\{(1, 1), (1, 2), (1, 3), (1, 4), (3, 2)\} \subseteq [1, 3] \times [1, 4]:$$

Defining binary relations: Graph representation

程序代写代做 CS编程辅导

If $S = T$ we can define $R \subseteq S \times S$ as a **directed graph** (week 5).

- Nodes: Element
- Edges: Element

Example

$R = \{(1, 1), (2, 3), (3, 2)\} \subseteq [1, 3] \times [1, 3]$:

WeChat: cstutorcs
Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Operations for binary relations

Relations are sets, so the standard set operations (\cap , \cup , \setminus , \oplus , etc) can be used to build new relations.

Two operations that [QR code] binary relations uniquely:

- **Converse:** If $R \subseteq S \times T$ is a relation, then $R^\leftarrow \subseteq T \times S$:

$$R^\leftarrow = \{(t, s) \in T \times S : (s, t) \in R\}$$

WeChat: cstutorcs

- **Composition:** If $R_1 \subseteq S \times T$ and $R_2 \subseteq T \times U$, then

$$R_1; R_2 \subseteq S \times U:$$

Email: tutorcs@163.com

$$R_1; R_2 \stackrel{\text{def}}{=} \{(s, u) \in S \times U : \text{there exists } t \in T \text{ such that }$$

QQ: 749389476 $(s, t) \in R_1 \text{ and } (t, u) \in R_2\}.$

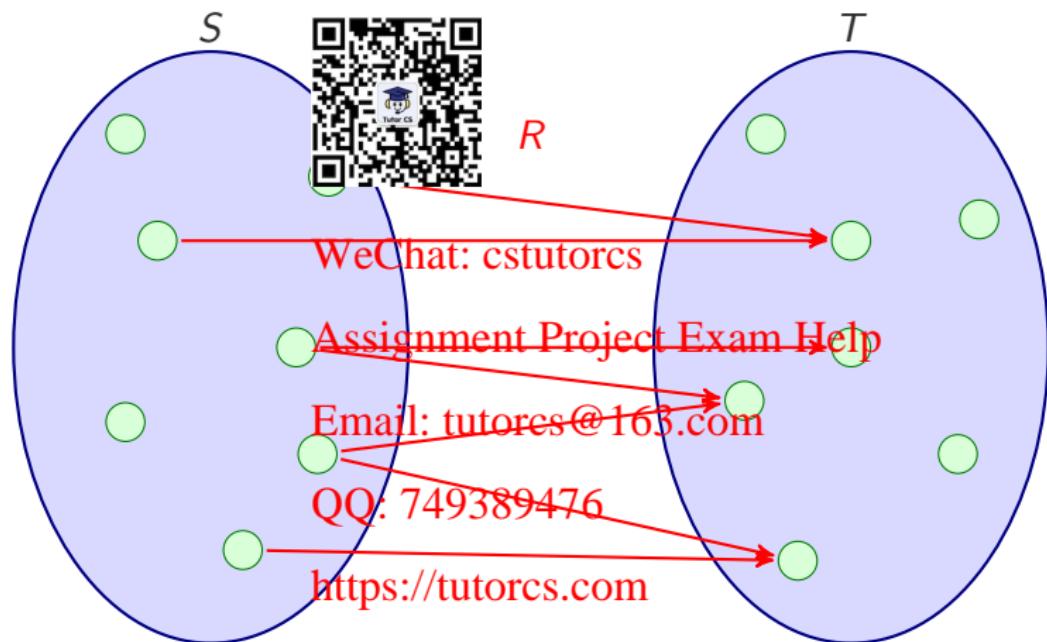

<https://tutorcs.com>

Fact

$$(R^\leftarrow)^\leftarrow = R$$

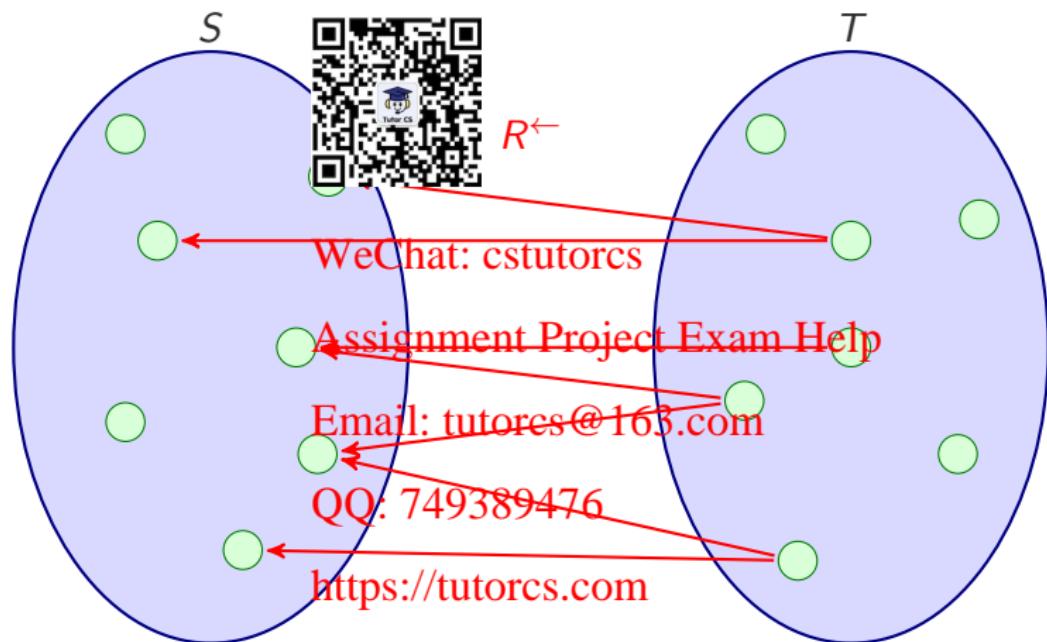

Binary relation: Graphical representation

程序代写代做 CS 编程辅导

Binary relation: Graphical representation

程序代写代做 CS 编程辅导

Relational images

Given $R \subseteq S \times T$, $A \subseteq S$, and $B \subseteq T$.

Definition

- Relational image of A :

$$R(A) \stackrel{\text{def}}{=} \{t \in T : (s, t) \in R \text{ for some } s \in A\}$$

WeChat: cstutorcs

Assignment Project Exam Help

- Relational pre-image of B , $R^\leftarrow(B)$:

Email: tutorcs@163.com

$$R^\leftarrow(B) \stackrel{\text{def}}{=} \{s \in S : (s, t) \in R \text{ for some } t \in B\}$$

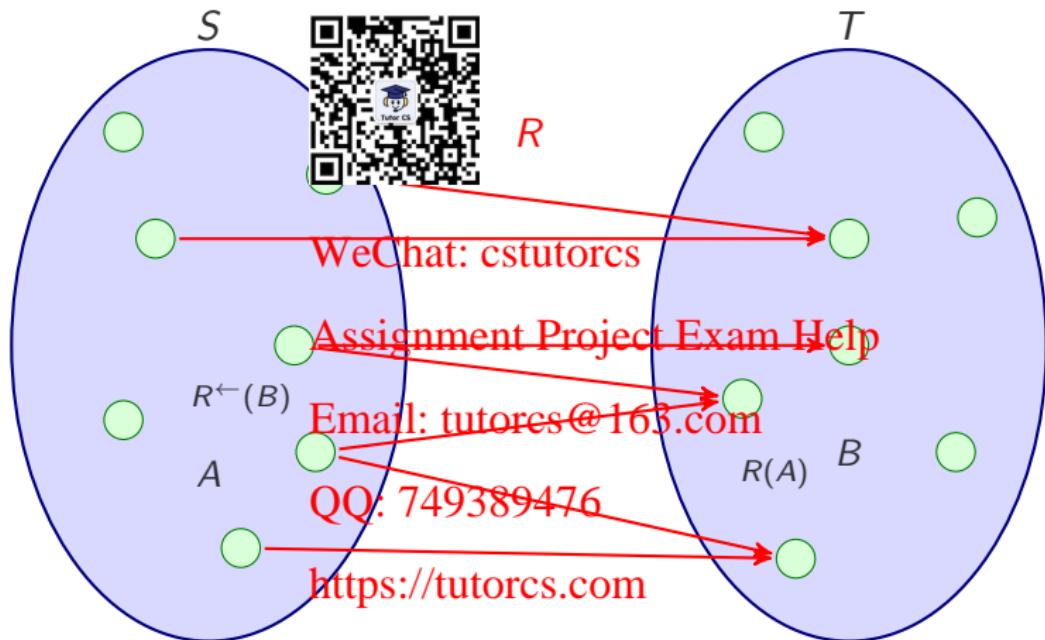

QQ: 749389476

<https://tutores.com>

Observe that the relational pre-image is the relational image of the converse relation.
